Over 100'000 investment instruments covered across all relevant asset classes.

URO Investment Advisory Platform

URO Advisor Basic: Digital E2E advisory solution for simple investment and pension services.

URO Advisor Pro: Digital E2E advisory solution for comprehensive investment and pension services. Extendable with the «Institutional Advisory», «Portfolio Optimizer» and «Investment Campaigns» modules.

URO Advisor Hybrid: Seamlessly connected digital and personal advisory in the end-client channel (combination with Advisor Basic / Pro).

URO Self Invest Basic: Fully automated self-service solution for fund savings plans, integrated in the end-client channel.

URO Self Invest Pro: Fully automated self-service solution for discretionary mandates, integrated in the end-client channel.

URO Self Invest Basic: Fully automated self-service solution for pillar 3a securities savings with strategy funds.

URO Self Invest Pro: Fully automated self-service solution for pillar 3a securities savings with ETF portfolios incl. rebalancing algorithm.

Note: All solutions except Hybrid (which requires combination with Advisor Basic / Pro) can be operated as a standalone solution.

2

INTRODUCTION TO OUR HACKATHON CASE

THE 60-SECOND PROBLEM

What an investment advisor faces today

1

Calls come without warning

A client calls or walks in unannounced — the advisor has one or two minutes to get ready, not thirty.

2

The data sits in silos

Portfolio analytics, CRM history and market news each live in a different system and have to be pulled manually.

3

Prep is manual storytelling

Even for scheduled meetings, the advisor must turn complex, distributed data into a storyline by hand.

4

The moment passes

By the time the advisor is ready, the window for a confident, well-informed conversation has often closed.

Why this is a business problem, not just an inconvenience

Preparation time lost on every client interaction, advisors caught off guard by portfolio or market moves, missed talking points and re-investment opportunities — and conversation quality that varies from advisor to advisor.

HACK CHALLENGE: FROM PING TO PITCH IN 60 SECONDS

An AI briefing assistant inside URO Advisor Pro

1 · TRIGGER

One click by the advisor

Inside the existing advisory workflow (URO Advisor Pro) — no extra tool, no manual data hunt.

2 · COMBINE

Three worlds of data

Client, portfolio & position data (URO Advisor Pro) · external market news for tactical sentiment · the bank's CIO / house view.

3 · BRIEFING

~60 seconds to read

- a) recent performance and its drivers
- b) portfolio health check
- c) outlook — plus concrete next best actions (SAA deviations, risk violations, instruments to buy / sell / switch).

What the advisor gets

Not a data dump: one synthesized story, ready before the advisor could miss an relevant talking points.

SAMPLE REAL-LIFE USE CASE

The unannounced client call

The business value we are after

Preparation time saved on a client interaction · higher advisor confidence and reputation · fewer surprises and missed opportunities · consistent conversation quality across the whole advisory team.

WHAT YOU GET — AND WHERE TO GO FURTHER

Data & technology we provide

- Sample portfolios (anonymized mock data)
- Securities data
- URO Advisor Pro UI screenshots
- Data access via Git-Repo
- And you source the rest: free news feeds (e.g. Yahoo Finance, cash.ch etc.) and publicly available CIO / house-view reports from major banks.

Bonus Cases

- **Ex-custody import:** read a client's external custody statement (PDF) into a virtual portfolio that behaves like a native one in URO Advisor Pro — and include it in the briefing.
- **Chatbot:** interactive follow-up so the advisor can ask clarifying questions mid-call.
- **Creativity:** voice, visual card, chat bubble — anything the advisor can absorb in seconds.

Good to know

In the first 12 hours of the hackathon please **focus on solving the main hack challenge** (FROM PING TO PITCH IN 60 SECONDS – AI BRIEFING ASSISTANT). If you have **enough time left**, use **Saturday's partner slot to deep dive via Q&A into the bonus cases** (ex-custody import, chatbot and additional creative features).

HOW WE WILL JUDGE IT

Weighted judging criteria — a working prototype beats a slide-ware concept

25%

Problem fit & business value Does it solve the advisor's 60-second prep need — development, health check, outlook, next best actions? Could it be piloted with a few relationship managers right after the hackathon?

25%

Implementation quality & robustness End-to-end working demo, stable data flows, sensible error handling and latency; clean, modular APIs with hooks for news, CIO view etc.

20%

AI quality: relevance & grounding Concise, client-specific briefing with practical next best actions — fact-based, no generic or hallucinated content.

15%

User experience Readable in ~60 seconds, clear structure and highlights, one-click trigger that fits the existing advisor workflow.

15%

Bonus points Ex-custody import, follow-up chatbot, and originality in how the briefing experience is designed.

On stage: live end-to-end demo plus a short deck — and a test client we hand you shortly before

...and one more thing

We are looking for a summer intern — summer 2027

Beyond the hackathon we are offering a (paid) summer internship in 2027 — working on the same kind of client, data and product questions you are tackling today, only with more time. **Three possible focus areas depending on your profile:**

Product Management

Shape features end to end and support Product Management in their daily tasks.

Business Analysis & Project Mgmt.

Turn business questions into requirements and support project management to keep delivery on track.

Application Management

The tech-focused track: support and improve our applications, including integrations, data flows, testing and automation.

Interested? Just send us your CV — contact details are on the next slide.

Contacts for your questions

Let's talk about your
questions.

Happy Hackathon!

URO ADVISOR BASIC

Our Solution

- Digitally supported **End-to-end investment advisory process** for simple investment and pension services (fund savings plans, withdrawal plans, pillar 3a)
- Lean and comprehensible advisory processes for various business cases such as: **Profiling, New account opening, Amendment, Portfolio review**
- **Risk Engine** for the accurate valuation of investment instruments and portfolios
- **Rule Engine** for the Pre- and post-trade review of regulatory and contractual rulebooks
- **Comprehensive integration** with the Finnova core banking system
- **Open architecture** for connecting individual third-party systems and integrating additional data sources (ESG, funds breakdown, product documentation, digital signature, etc.)

Key benefits

Ensure compliance
Ensure compliance with contractual and regulatory requirements (e.g. FIDLEG, MiFID II)

Increase efficiency
Increase efficiency and reduce sources of error through process digitalization and optimization (advise more clients in less time).

Manage risks
Monitor risks in client portfolios with automated portfolio monitoring incl. notifications to the client advisor.

Deliver an advisory experience
Design modern client meetings thanks to a device-independent advisory solution.

URO ADVISOR HYBRID

Our Solution

- Comprehensive **Hybrid Advisory solution** for the **integration into e-banking and mobile banking** solutions of the bank
- Use as a communication channel to the client for investment and pension topics in combination with URO ADVISOR BASIC and URO ADVISOR PRO
- Functionalities such as:
 - **Profiling**
 - **Investment Campaign Management** (buy, sell, switch) for comprehensive and transaction-based investment advisory
 - **Transmission of investment proposals** to the client (incl. comments by the client)
 - End User **Portfolio Monitoring / Portfolio Health Checks**

Key benefits

Connect channels

Combines automation with human expertise: clients benefit from the efficiency of digital advisory and the security of personal contacts.

Increase efficiency

Enables advisors to focus on complex, value-adding conversations while the platform offloads routine tasks.

Build trust

Strengthens client trust by combining human judgment with digital channels.

Engage clients

Enables more proactive and frequent communication through digitally supported interactions that investors expect today.

URO SELF

Our Solution

- Comprehensive **End-to-end self-service solution** for the **integration into e-banking and mobile banking** solutions of the bank
- Modular concept for building your own self-service offering for
 - Pension and pension securities savings (URO SELF PENSION BASIC / PRO)
 - Vested benefits and vested benefits custody account (URO SELF PENSION BASIC / PRO)
 - Self-service fund savings plans (URO SELF INVEST BASIC / PRO)
 - Self-service withdrawal plans (URO SELF INVEST BASIC / PRO)
 - Self-service discretionary mandates (URO SELF INVEST BASIC / PRO)
- **Comprehensive integration** with the Finnova core banking system
- **Open architecture** for connecting individual third-party systems / data sources
- **Risk Engine** for the valuation and analysis of instruments and portfolios
- **Rule Engine** for mapping contractual and regulatory rulebooks

Key benefits

Offer individuality

Individual adaptation to the client's investment preferences – from asset allocation to sustainability and other values-based investment themes.

Increase efficiency

Cost-efficient, fully automated investment solutions that serve clients across all generations.

Monitor risks

Build trust through transparent monitoring and clear portfolio structuring with automatic rebalancing.

Engage clients

Actively engages clients through technology-supported advisory and smooth digital access.
